Peer Evaluation Form

Rowan was the group leader and was the one who called me and Alex to join his group. He had the idea of using our Jade project for our project management assignment as well, because it could use any project and was more focused on the planning than the execution, and we were in the same group in both projects.

We had a couple of meetings early on the semester where we decided to choose the flight booking project and discussed ideas to implement. A couple of weeks later we still hadn't started the project, and when I asked they didn't seem interested, so I started by creating the classes and properties according to the requirements document and showed them on the next day. Rowan said it was looking good and Alex didn't show much interest.

Later on, the idea of using the Jade project for the project management assignment was ditched in a project management meeting where Rowan claimed that we should focus on our project management assignment first because Jade was too complex and we didn't have enough knowledge to do much of the project. I didn't understand how it would help us, since we still would have to do our Jade project anyway, but I accepted since I was the only one who disagreed. But I told them it meant we would have less time to work on the Jade project and we should start putting more effort into it, since we still had almost nothing done. Rowan said that he wanted to, but he wasn't understanding Jade and wouldn't be able to get much done, and Alex didn't say anything.

Then I implemented some methods by reapplying what we had done in some of the earlier lab exercises. I told them and asked one more time and Rowan said he was going to try to do some work on the forms. I kept working on it over time and eventually reached a point where I needed the forms to keep working. Around this point Rowan started saying he was unhappy with the course and was thinking about leaving and getting a job, so I started asking him more often to at least do the forms he was going to. Around that time, during a break from a IT606 class, Alex mentioned while laughing that we would probably go to fail this paper. I told him that I couldn't fail and that it wasn't funny. Rowan was not in class on that day, but he showed up the next day, so I called them both for a meeting in another classroom. I asked them to tell me whether they would try to do the project or not, and they both said it was unlikely that we were going to make it on time. I showed them I had got further ahead on the project than they thought, and that it was possible to finish if they contributed. I also told them I couldn't just fail the paper, because I would have to explain myself to the immigration and pay the international fees to retake the paper. So I said I needed them to tell me at that moment, otherwise I going to ask the tutor if there was enough time to join another group, and they both said they were going to try to help me, and Rowan said he could bring the forms if I waited until next Monday (that was on a Tuesday). We finished the meeting and I went back to class to explain the situation to the tutor, but he had left. Next Monday, Rowan didn't show up, so I talked to the tutor and he said it was too late to tell him that. I emailed and messaged Rowan about the forms, and he said he was dealing with problems and was unlikely to come back to class. And he never sent the forms, so we lost a whole week and made no progress. Before I didn't want to do a whole semester group project by myself, but at that moment I was too worried about not having enough time to finish it, so I just kept doing the forms and the rest of the project by myself. I asked Alex to contribute but he said it was an issue because we couldn't both work on it at the same time. So I kept working on it as much as I could and was making considerable progress, and asked Alex to work on it over the weekend while I would be working on another assignment, and said he could message me if he wasn't understanding what I had done so far. Next Monday morning I asked him how much he was able to get done and he said he couldn't do it because he kept staring at the screen and Jade was too daunting. So we lost one more weekend. I knew I would have to do it all by myself, so I've been focusing almost exclusively on this project since then, having to leave aside other papers since I got better marks on them so far. And I was the only one on my group doing that, the same way I haven't been doing the lab exercises to use all the time for the project, while the other group members kept doing their labs and focusing on other papers. As I have a job and during the week I work after class and only have free time to do my assignments over night and between classes, I kept asking Alex to work on the assignment while I was at work, so eventually he contributed, but only on the last week. He worked on the schema files on the 6th and 7th of November, and on the documentation on the last day. On the 6th, he worked on the user login. I had already looked it up on the documentation, so I showed him beforehand how to do it. I came back from work around 22:30h and asked him how much he had done, and he said he eventually ran into a bug and got stuck, so I called him and shared my screen to try to fix the bug with him, but eventually he said he was too tired and needed to sleep, so I stayed working overnight once again, fixed the bug and finished the authentication features. I kept working on it in the next day while the other groups were presenting and asked him to work on the printing ticket feature while I was working again, and this time asked him to at least work on the documentation if he got stuck. I checked up on him again after work and he had done the ticket, but told me he would have to stop to focus on his other assignment from that day on. After that, he just worked on the documentation on the last day.

That being said, the project I submitted is far from what I could and would like to have achieved, and I also have my share of blame. I am not a great leader, and though I wasn't the group leader, I could have pushed my group members harder or at least let the tutor aware of these issues earlier. And after all the effort put on and the sleepless nights delving into this project, at least I can say I have learned Jade much better now, which should be the main reason why we take this course after all.
